TECHNOLOGICAL FORECASTING AND SOCIAL CHANGE 41, 455–456 (1992)

Subject Index—Volume 41

Australia, structural influences on innovation, 423
Canada, structural influences on innovation, 423

Chaoslike states, logistic growth and, 111
Command economy, transition to market economy, 319
  Communication model for socioeconomic development, 283
Company life, history analysis, 13
Computer products, positioning of, 391
Culture, innovative capacity and, 423
Czechoslovakia, market conditions and, 249

Decision-making, equilibrium and disorder in, 401
Defense-related technology programs, 365
Diffusion models, price and, 177
Dimensional consistency in model equations, 177

East Germany, investments and, 243
Eastern Europe, environmental protection and, 147
Econometrics, informational approach and, 401
Economic policy restructuring, East Germany and, 243
Economic reform, the GDR and, 223, 319
Economic sovereignty, Estonia and, 271
Economy, transition from centralized to market, 257
Energy, nuclear, 445
Energy conservation study, scenario building and, 121
Energy market shares, New Zealand and, 97
Environmental protection, Eastern Europe and, 147
Estonia, economic independence and, 271
Exchange rate models, forecast comparison of, 435

Financial decisions, social costs and, 29
Forecasting, USSR and, 341
Forecasts, Kalman filter and, 435

German Democratic Republic
  economic reconstruction and, 319
  projections: political, economic, technological, and social, 211
  strategic challenges for, 243
  unification and economy, 223

High-tech industries, R&D industrial policy and, 41
Hydrocarbon reserves, estimating, 71

India, cement industry and energy conservation, 121
India, oil, gas, and production forecast for, 71
India, market demand models, 177
Industrialization, old-era and new-era, 351
Innovation, structural influences on, 423
Interpretive structure modeling, scenario building and, 121

Japan, trade competition and, 41

Kalman filter, forecast comparison with, 435

Logistic growth, chaoslike states and, 111

Management, process control and, 57
Manufacturing paradigms, policies and, 351
Market economy, transition from command economy, 319
Market-coordinating–information-based system, 283
Materials revolution, trends and, 189

New Zealand, system dynamics energy model, 97
Nuclear future, 445

Poland
  environmental protection and, 147
  market economy and, 257
Policy
  industrialization and, 351
  national market system and, 1
  nuclear weapons and energy, 445
  trade and, 41
Population growth, logistic growth curve and, 111
Privatization, Czechoslovak economy and, 249
Process control, 57
Product positioning, 391

R&D
  rivalry and industrial policy, 41
  technological spin-off and, 365
Reserves, oil and gas in India, 71
Romania, socioeconomic model for, 283

Scenario building, 121
Social costs, financial decisions and, 29
Socioeconomic development, communication model for, 283
Soviet economy, restructuring of, 309
Sterile insect programs, process control and, 57
Stock markets, technology and, 1
System dynamics energy model, New Zealand, 97
Systems transformation, East–West, 223

Technogenesis, company life history and, 13
Technological change, the GDR and, 211
Technological spin-off, 365
Technology diffusion
  centralized economy and, 309
  spline-function evaluation method and, 309
Trade, the GDR and, 211
Trade competition, 41

United Kingdom, structural influences on innovation, 423
United States, structural influences on innovation, 423
Urban environment, innovation dynamics and, 13
USSR, history of forecasting and, 341

Weapons, nuclear, 445
